

PPAP Seminars: Series release in the automotive industry

Performance Description

**Methodology Training
Parts Production Approval Process**

The participants learn all there is to know about how proofs and documentation for series release can and should be provided, based on APQP project management. In the course of the training, both the general approach as well as the specific measures and their sequence plus the observance of the relevant sets of rules are conveyed, discussed and practiced thoroughly.

Objectives

- ⇒ Gaining an understanding of the PPAP 4th Edition components
- ⇒ Gaining an understanding of the sets of rules
- ⇒ Developing proofs of capability
- ⇒ Compiling the documentation
- ⇒ Applying for series release
- ⇒ Avoiding "rejection"
- ⇒ Release classification

Benefits to Customers

Enduring releases can be achieved with relatively little effort through structured and purposeful preparation, provision of proof, documentation, application for and release of series processes on the basis of advanced quality planning (APQP). Misunderstandings on the customer and supplier side can be cleared up in advance and adherence to project schedules is facilitated. The proofs required to document well-mastered series processes are prepared in an efficient manner.

Further Information

Handling

Initially, the target group and PPAP examples from operational practice are defined in conjunction with the client. Existing customer-specific requirements regarding release processes will be taken into account in the planning. The instructors from Rhein S.Q.M. will combine theoretical inputs with these practical examples to convey the methodology with relevance to everyday operational circumstances. In the course of group practice sessions with the participants, the provision of proofs, their PPAP documentation and the lessons learnt will be reinforced by getting the participants to develop alternative approaches for "existing" PPAP applications.

Duration: 1.0 day (full version incl. exercises)

Min. number of participants: 3
Max. number of participants: 12
